

Qualitica™

# Increasing quality of Software

---

Preparation of testing documentation  
Web, apps, corporate software testing

## Whats our identity

**>20**

Professional testers

**>3**

years of testing experience

Testing of commercial and government software

## What are we testing?

Desktop

Mobile apps

Websites and cloud services

### Levels of testing:

- Functional testing
- Testing automation
- Performance testing
- Security testing
- Compatibility testing
- Usability testing

## Automation tools

- Programming language – Java. Framework for testing– TestNG/JUnit.
- Project collector – Maven/Gradle. Selenide library for ui tests .
- RestAssured library is used for back testing
- Continued integration instrument – Jenkins
- Reports are formed through Allure
- Load testing is made through Jmeter

## Our process

- Analysis of incoming data
- Development of Testing strategy
- Choice of methodology
- Development of Plan of testing
- Development of check list and test cases
- Project Deadlines and number of iterations

## How do we work?

- Reproduction of testing scenario/situation
- Errors detect and documentation
- Validating of defect correction
- Reports after testing was made
- Recommendations on improvement of a system
- Technical support on the project (the second line of TS)

## The cost of testing

### **One time testing, turn-key project**

Acceptance testing of software against the product specifications, user requirements and other product parameters

The cost is identified according to the complexity of the product.

### **Integrated development team**

Providing the necessary number of testers and integrating them in project. The price can vary from 700 to 1400 rubles and depends on the competence of the tester
